

Snow

- Electrical components

Store all well documents in an easily accessible location.

Protect your well head by marking it with a flag or post to prevent it from being hit by vehicles or other machinery.

Prevent freezing by considering the following:

- Insulate above ground components (well house) and piping.
- Wrap pipes in a well house or frost pit with heat tape or heat cables in a single layer.
- Place a heating source such as a small heater or heat lamp in the frost pit or well house to
